

HOW TO USE THIS STUDY SYSTEM

AC300/AC375 -- Final Exam, Week 10

You have six documents now. This page is the seventh -- the one that tells you what order to use them in and why, so the system works as a system instead of six separate PDFs competing for your attention the week before the exam.

THE LINEUP -- WHAT EACH DOCUMENT IS ACTUALLY FOR

Final Study Guide (55 pp)

First pass, every week

Your primary text. Full reference per channel: pathway, functions, indications, highest-yield points, clinical pearls. Read this to LEARN, not to test yourself.

Master Special Points Decoder

Cross-reference, ongoing

Organized by POINT CATEGORY, not by channel -- "all 12 Yuan-Source points" in one place instead of scattered across 12 channel pages. Use when the Study Guide's organization isn't the retrieval structure you need.

Final Cram Sheet (5 pp)

Final 48 hours

Everything compressed to its densest, fastest-scan form. This is not where you learn something for the first time -- it's where you confirm you still know it.

Master Quiz Bank & Key

Retrieval practice, weekly

Part 1 = the REAL Quiz 1-6 (36 questions, verified against transcripts). Part 2 = 264 additional practice questions I wrote, all 9 weeks. Part 1 tells you exactly what's been tested; Part 2 is volume for reinforcement.

Practice Final, Set 1 & 2

1-2 full run-throughs, final week

Two full closed-book simulations, no week labels, timed conditions. This is the dress rehearsal, not a study tool -- don't open the answer key until you've finished the whole thing.

THE WEEKLY CYCLE -- HOW THE PIECES FIT TOGETHER

Adapted from interteaching: prep before exposure, not after

The single highest-leverage change you can make to how you use these documents: answer questions on a topic BEFORE you read about it, not after. Struggling to retrieve something you haven't learned yet feels unproductive, but it's exactly what makes the reading that follows stick -- it tells your brain what to pay attention to.

1 Prep cold

Before opening that week's Study Guide section, pull 5-6 questions on the topic from the Master Quiz Bank (Part 2) and attempt them with nothing open. You will get most of them wrong. That's the point -- it's not a test, it's priming.

2 Read to fill the gaps

Now read that week's Study Guide section, paying deliberate attention to whatever you got wrong or guessed on in Step 1. This is what interteaching calls the "clarifying lecture" -- focused on your actual gaps, not a generic re-read.

3 Re-test the same items

Go back to the exact questions from Step 1. If you're now getting them right, the material moved from short-term to working knowledge. If not, that's real signal -- log it (see the Confusion Log idea below) rather than re-reading and hoping.

4 Cross-check in the Decoder

For any special-point category that gave you trouble (Yuan-Source, Luo, Xi-Cleft, etc.), look it up in the Decoder's category view. Seeing all 12 channels' version of the same point-type side by side often resolves confusion that channel-by-channel reading doesn't.

BUILT-IN, NO NEW FILE NEEDED

Confusion Log	Keep a single running note (paper, notes app, whatever) of specific items you get wrong across Steps 1 and 3, week over week. By Week 9 this becomes your single most efficient review document -- shorter than any of the six PDFs, and it's entirely YOUR gaps, not a generic list.
Utility-value check	Once a week, in one sentence: why does this week's material actually matter for the practitioner you're becoming, beyond the exam? You know the research on this better than anyone -- the point is that YOU write the connection, not that I tell you one.

THE FINAL TWO WEEKS -- SHIFTING FROM LEARNING TO CONFIRMING

Week 9 review -> Week 10 final

By Week 9, the goal changes. You're not learning new material (Dr. Zhang confirmed Week 9 is 100% review) -- you're confirming what's solid and triaging what isn't. Don't keep reading the Study Guide cover to cover; that's Weeks 1-8 behavior applied to a week where it's the wrong tool.

Run Practice Final Set 1	Full closed-book, timed, no peeking. Score it. Do NOT read explanations yet for anything you got right -- only for misses and guesses.
Work the Confusion Log	Whatever's accumulated there all course is now your primary study document. It's already filtered to exactly what you don't know.
Run Practice Final Set 2	48-72 hours later, same closed-book conditions. Compare to Set 1 -- new misses here are your highest-priority items for the final 48 hours.
Cram Sheet, cover to cover	One full pass, out loud if that helps retrieval. This is confirmation, not first exposure -- if something here surprises you, that's a flag to go back to the Study Guide entry, not just re-read the Cram Sheet line.
Quiz Bank Part 1 only	The 36 real questions, one last time. This is verbatim-sourced content -- if you get every one of these right, you've covered the highest-confidence-of-recurrence material there is.

ONE LAST THING

None of this works as well if the underlying material is wrong -- which is exactly why every document in this system went through repeated verification passes before you got them: coordinates checked against rendered PDFs, answer keys diffed programmatically against source data, factual claims cross-checked against the actual course transcripts. The system is trustworthy because it was checked, not because it was assumed to be fine. Use it the same way you'd want a student to use anything you built: confidently, because you already know it holds up.
