

AC300/375 · Pre-Lecture Analysis Sheet

Week 6 · Pericardium, San Jiao, Gallbladder & Liver · Interteaching Prep Guide

Sections A–F + Inter-Quiz

PC (9) + SJ (23) + GB (44) + LR (14) = 90 points · Middle Circuit complete this week

This prep guide follows the behavioral interteaching model: complete it BEFORE lecture, using the Study Guide / Cram Sheet / assigned reading (CAM p.77-82, MOA p.367-370, 387-390, 417-421, 469-472) as source material. Bring your answers and your Section E confusion points to class — interteaching pairs/groups are built to target exactly those gaps.

Section Map:

- A — Factual Recall (terminology, counts, first/last points, special points)
- B — Conceptual Understanding (pathway logic, branches, function)
- C — Clinical Application (trap notes, indications, scenarios)
- D — Synthesis & Connections (Middle Circuit, prior weeks)
- E — Points of Confusion (muddiest-point — bring to class)
- F — Discussion / Pair-Share Prompts
- Inter-Quiz — ACQ (new PC/SJ/GB/LR content) + MAINT (retention check, Wk 1-5)

Quiz timing note: Quiz 4 (given THIS week, in class) covers BL/KI (Week 5) material — the MAINT items below reinforce that. Quiz 5 (given next week, Week 7) covers this week's PC/SJ/GB/LR content, so treat this sheet as direct Quiz 5 prep.

This Week's Four Channels

Channel	Element/Polarity	Peak	Pts	Paired	Front-Mu	Back-Shu
PC — Pericardium	Fire (Minister) · Yin	7–9 PM	9	SJ	CV17	BL14
SJ — San Jiao	Fire (Minister) · Yang	9–11 PM	23	PC	CV5	BL22
GB — Gallbladder	Wood · Yang	11 PM–1 AM	44	LR	GB24	BL19
LR — Liver	Wood · Yin	1–3 AM	14	GB	LR14	BL18

How to Use This Sheet

BEFORE lecture: Complete Sections A–D from memory using the Study Guide, Cram Sheet, and assigned reading. Rate your confidence honestly — the point is to expose gaps now, not in class.

DURING lecture: Annotate directly on this sheet as Dr. Zhang covers material. Correct anything you got wrong in Sections A–D in a different color if possible.

AFTER lecture: Complete Section F with your interteaching pair. Run the Inter-Quiz self-check within 24 hours, and again before Wednesday's Quiz 4 and before Lecture 7.

Source Note

This week's channel-fact content is sourced from Lecture_61102.pdf (70-slide deck) and the AC300 Channel Workbook (CAM 4th Ed. / MOA 3rd Ed.). The Sections A–F + Inter-Quiz interteaching structure is Jon's own study framework, not part of Dr. Zhang's course materials. Two items below are flagged as unresolved against source: PC's crossing-point count (0, per slide 70 recap) and GB's crossing-point count (slide 51 states "12 points 6 meridians" but names only 9 points — confirm with Dr. Zhang).

Section A — Factual Recall

Answer from memory first; check against the Study Guide only after.

1. How many points on the Pericardium channel? San Jiao channel? Gallbladder channel? Liver channel? What is the combined total for the week?

2. Name the first and last point of PC, of SJ, of GB, and of LR (name + number for each).

3. State the element, polarity, and peak two-hour window for all four channels covered this week.

4. Name each channel's pertaining organ and connecting organ (PC, SJ, GB, LR).

5. Which point is the Confluent point of SJ, and which extraordinary vessel does it open? Same question for GB.

6. Name the Front-Mu and Back-Shu point for each of the four channels.

7. How many crossing points does SJ have, and with how many other meridians? Name at least six of the actual points.

8. How many crossing points does PC have? (Check the Week 6 slide recap list carefully before answering.)

Quick-Reference: Special Points This Week

PC: Confluent+Luo PC6 (Yinwei Mai) · Yuan-Source+Shu-Stream PC7 · Xi-Cleft PC4 · He-Sea PC3

SJ: Confluent SJ5 (Yangwei Mai) · Luo SJ5 · Yuan-Source SJ4 · Xi-Cleft SJ7 · He-Sea SJ10

GB: Confluent GB41 (Dai Mai) · Luo GB37 · Yuan-Source GB40 · Xi-Cleft GB36 · He-Sea+Influential(sinews) GB34

LR: Yuan-Source+Shu-Stream LR3 · Luo LR5 · Xi-Cleft LR6 · He-Sea LR8 · Command(face) LR3

Section B — Conceptual Understanding

Explain the logic, not just the list — this maps to the running-course quiz format.

1. Sketch (in words) all 3 branches of the Pericardium channel in order, starting from the chest. Where does each branch terminate?

2. Sketch (in words) all 3 branches of the San Jiao channel. Which branch links SJ to the Gallbladder channel, and at which point?

3. Sketch (in words) all 5 branches/segments of the Gallbladder channel, in the order the lecture presented them. Which branch is the 'straight portion' that carries most of the numbered points?

4. Sketch (in words) all 4 branches of the Liver channel. Which branch links LR back to the Lung channel, completing the full 12-channel qi cycle?

5. Explain the Three Main Circuits framework from this week's review slide: Outer Circuit (Yangming, Taiyang, Shaoyang), Inner Circuit (Taiyin, Shaoyin), and Middle Circuit (Jueyin). Which two channels finish the Middle Circuit this week, and why does that make sense given hand-Jueyin runs chest-to-hand while foot-Jueyin runs foot-to-abdomen?

6. Note: this 'Outer/Inner/Middle Circuit' framework (by yin-yang stage) is a DIFFERENT model from the 'Posterior Circuit / Inner Circuit' body-region terminology used in Weeks 1–4 for HT/SI/BL/KI. Do not conflate the two — explain the difference in your own words.

Reminder — Running-Course Numbering Convention

The lecture slides number each segment of a channel's course sequentially in parentheses, e.g. (1), (2), (3)... reflecting the exact order Dr. Zhang presents branches on the diagram. Use that numbering when you sketch a pathway from memory.

Section C — Clinical Application

1. A patient presents with nausea, vomiting, and cardiac-type chest discomfort. Which point is described as the single most important PC point for this presentation, and which extraordinary vessel does it open?

2. A patient needs emergency resuscitation (loss of consciousness). Name a PC point and a KI point traditionally paired for this purpose (recall from Week 5).

3. GB21 carries an explicit clinical caution from lecture and workbook. What is it, and what is the point otherwise used for?

4. Name the point that is Influential point for the sinews, and state two clinical uses.

5. A patient has one-sided (migraine-type) headache with a bitter taste in the mouth. Which channel's pathway and internal-organ association explain both symptoms together?

6. LR3 is described as the single most important LR point. What does it treat, and what special-point category makes it useful 'for the face'?

7. Name the classic two-point combination ('Four Gates') that combines an LR point with an LI point, and state its general function.

Trap Note

PC (like HT in Week 4) is flagged with ZERO crossing points on the lecture-slide recap — a favorite exam trap. Don't assume every channel shares points with others just because SJ and GB have long lists.

Section D — Synthesis & Connections

1. Dr. Zhang's Week 6 review slide states this lecture completes the Middle Circuit (Jueyin). Name the hand-Jueyin and foot-Jueyin channels and briefly state how their directions of flow (chest to hand, foot to abdomen) fit the general nomenclature rule from Week 1.

2. PC/SJ share the Ministerial Fire element with no other channel pair in the course. Compare Ministerial Fire (PC/SJ) to the Sovereign/Emperor Fire pairing you learned in Week 4 (HT/SI) — what is the conceptual difference?

3. GB/LR are both Wood-element channels, like ST/SP were Earth in Week 3. Restate what Wood governs physiologically and how that shows up in GB and LR clinical pearls.

4. By end of this week, all 12 primary channels have been introduced. Using the 12-channel circulation-sequence slide, write the full Qi-flow order from LU through LR from memory.

5. Compare SJ's 23-point count and complex 3-branch pathway (hand to head) to another 'long' Yang channel you already know (e.g. BL, Week 5). What do long Yang channels tend to have in common (crossing points, syndrome breadth)?

Circuit Terminology — Keep These Straight

Two frameworks use the word 'circuit': (1) the Anterior/Posterior body-region terms from Weeks 1–4 ('Posterior Circuit,' also called 'Inner Circuit' on an earlier slide, for HT/SI/BL/KI), and (2) this week's Outer/Inner/Middle Circuit-by-yin-yang-stage model. Identify which one a question means before answering.

Section E — Points of Confusion (Muddiest Point)

Interteaching works because YOUR confusion drives the in-class discussion groups. Be specific — "I don't understand X because Y" is more useful to your pair than "I'm confused about SJ." Bring this page to class.

The single most confusing pathway detail this week:

The single most confusing point-category / special-points detail this week:

A clinical application I still can't confidently explain:

The part of the Middle Circuit / Three Circuits framework I'm least sure about:

A specific question I want answered in lecture:

Section F — Discussion / Pair-Share Prompts

For use in class with your interteaching pair or small group.

1. Compare your Section E confusion points with your partner's. Where do they overlap? Where do they diverge?

2. Teach your partner the 3 PC branches and the 5 GB branches from memory, in order, without notes. Have them check you against the Study Guide.

3. Quiz each other on the crossing-point counts: SJ (10 pts/3 meridians), GB (per the slide's stated 12 pts/6 meridians — note only 9 are actually named; flag this as unresolved), LR (6 pts/2 meridians). Which count is hardest to remember and why?

4. Discuss: if you were writing a Quiz 5 question designed to catch the 'PC has zero crossing points' trap (like HT in Week 4), what would it look like?

5. Trade Middle Circuit explanations (Section D, Q1) verbally. Does your partner's phrasing make it click any better than yours did?

Pair-Share Facilitation Tip

If your pair finishes early, swap roles for a Section D synthesis question — have the less-confident partner explain first, then the other corrects/adds detail. This surfaces gaps neither would catch alone.

Inter-Quiz

ACQ = new PC/SJ/GB/LR content · MAINT = retention check, Wk 1–5

Self-score honestly before lecture. MAINT items pull from LU/LI/ST/SP/HT/SI/BL/KI (Weeks 1–5) to keep prior channels active in memory ahead of the Week 7 quiz on this material.

ACQ

Name the point that is both Confluent AND Luo point on the Pericardium channel, and the extraordinary vessel it opens.

MAINT

Name the point that is both Confluent AND Luo point on the Kidney channel, and the extraordinary vessel it opens. (Week 5)

ACQ

Which SJ point is Confluent, and which extraordinary vessel does it open?

MAINT

Which SI point is Confluent, and which extraordinary vessel does it open? (Week 4)

ACQ

Which GB point is both He-Sea AND Influential point for the sinews?

MAINT

Which BL point is both He-Sea AND Command point for the back? (Week 5)

ACQ

Name LR's Yuan-Source point (it shares its number with Shu-Stream — name both categories).

MAINT

Name LU's Yuan-Source point (it also shares its number with Shu-Stream). (Week 2)

ACQ

State the Front-Mu point for GB and for LR.

MAINT

State the Front-Mu point for HT and for SI. (Week 4)

ACQ

How many total points does this week add across all four channels (PC+SJ+GB+LR)?

MAINT

How many total points did BL+KI add together? (Week 5)

ACQ

Which point is Influential point for the sinews, and which channel is it on?

MAINT

Name one other Influential point you already know and what it governs. (any prior week)

ACQ

Name the two channels that complete the Middle Circuit (Jueyin) this week.

MAINT

Name the four channels that make up the Posterior/Inner Circuit from Weeks 1–4.

Mastery Criterion

Score yourself: count correct ACQ + MAINT answers out of 16 total. Aim for $\geq 14/16$ across three spaced self-testing sessions (e.g. today, Wednesday before Quiz 4, and the morning of Lecture 7) before Quiz 5.
