FINAL

1–9

PRACTICE FINAL EXAM -- SET 1

Channel Theory through Cutaneous Regions -- Cumulative

20 questions · MC / True-False / EXCEPT format · Weeks 1-9 · Modeled on Dr. Zhang's Final

FORMAT
Multiple choice
True/False + EXCEPT

COVERAGE
All 9 weeks
Cumulative, per Dr. Zhang

ANSWER KEY
Full explanations
for all 20 questions

How to use this

Close the book. No notes, no app - simulate real final-exam conditions.
Take all 20 in one sitting. Dr. Zhang's real final is 30 questions, cumulative, closed book.
Score yourself, then re-drill ONLY the categories you missed using the Final Study Guide + Cram Sheet.
Dr. Zhang has confirmed the real final reuses questions from EVERY quiz you've taken (Quiz 1-6) -- re-open each week's Quiz Kit as part of your review, not just this practice set.

Q1. How many primary (regular) meridians are there, and how many total acupoints across the Five Shu system?

A. 12 meridians; 60 Five Shu points
B. 14 meridians; 60 Five Shu points
C. 12 meridians; 72 Five Shu points
D. 10 meridians; 50 Five Shu points

Q2. [EXCEPT] All of the following are true of the direction-of-flow rules EXCEPT:

A. Yin meridians of the hand run chest -> hand
B. Yang meridians of the hand run hand -> head
C. Yang meridians of the foot run foot -> head
D. Yin meridians of the foot run foot -> chest/abdomen

Q3. Which circuit is completed first, chronologically, in the course sequence?

A. Outer/Anterior Circuit (LU-LI-ST-SP)
B. Inner/Posterior Circuit (HT-SI-BL-KI)
C. Middle Circuit (PC-SJ-GB-LR)
D. All three complete simultaneously

Q4. LU7 (Lieque) is loaded with which combination of special categories?

A. He-Sea + Xi-Cleft
B. Luo-Connecting + Confluent (opens Ren Mai) + Command (head/neck)
C. Jing-Well + Yuan-Source
D. Shu-Stream + Back-Shu

Q5. [T/F] True or False: LI4 (Hegu) and SP6 (Sanyinjiao) are both forbidden in pregnancy.

A. True
B. False

Q6. Where does the Stomach channel's pathway TRULY begin, versus its first numbered point?

A. ST1 Chengqi is the true origin
B. LI20 Yingxiang is the true origin; ST1 is just point #1
C. GV24 is the true origin
D. BL1 is the true origin

Q7. [EXCEPT] All of the following are true of the Spleen channel's 8-cun crossover with Liver EXCEPT:

A. It occurs 8 cun above the medial malleolus
B. Below 8 cun, SP runs posterior to LR
C. Above 8 cun, SP crosses in front of (anterior to) LR
D. This same crossover pattern happens on 3 other primary channels

Q8. How many crossing points does the Stomach channel have, and where are most of them located?

A. 6, mostly on the limbs
B. 14, mostly on the abdomen
C. 11, mostly on the face and head
D. 20, mostly on the trunk

Q9. HT7 (Shenmen) holds which dual special-point role, and why is this role predictable?

A. He-Sea + Luo-Connecting; predictable because HT is Yang
B. Shu-Stream + Yuan-Source; predictable because on YIN channels the Shu-Stream point IS the Yuan point
C. Jing-Well + Xi-Cleft; predictable because HT is the smallest channel
D. Front-Mu + Back-Shu; predictable because HT has no crossing points

Q10. SI3 (Houxi) is significant because it is:

A. The Yuan-Source point of SI, opening the Ren Mai
B. The Shu-Stream point of SI, also a Confluent point opening the Du Mai (paired with BL62)
C. The He-Sea point of SI, opening the Chong Mai
D. The Jing-Well point of SI, opening the Yin Wei Mai

Q11. Which organ does the Bladder channel internally connect with, and which is a common exam trap?

A. Kidney only; the trap is assuming BL connects to Lung
B. Lung and Kidney; no trap exists
C. Liver only; the trap is assuming BL connects to Spleen
D. Heart; the trap is assuming BL connects to Kidney

Q12. [T/F] True or False: The two parallel lines of the Bladder channel on the back run sequentially, one after the other, rather than at the same time.

A. True
B. False

Q13. A patient presents with heel pain. Which channel should you think of first, per Dr. Zhang's explicit clinical teaching point?

A. Liver
B. Kidney
C. Bladder
D. Spleen

Q14. Which TWO primary channels have zero named crossing points?

A. HT and PC
B. LU and LR
C. SP and KI
D. GB and SJ

Q15. The Gallbladder channel's 12 crossing points span how many meridians, and which is the most-forgotten one?

A. 6 meridians; GV14 Dazhui is the most commonly missed
B. 4 meridians; ST7 is the most commonly missed
C. 8 meridians; LR13 is the most commonly missed
D. 6 meridians; SI19 is the most commonly missed

Q16. Which pair of confluent points is described as the most-used pairing in clinical practice, per Dr. Zhang?

A. SI3 + BL62 (Du Mai + Yang Qiao)
B. LU7 + KI6 (Ren Mai + Yin Qiao)
C. SP4 + PC6 (Chong Mai + Yin Wei)
D. GB41 + SJ5 (Dai Mai + Yang Wei)

Q17. [T/F] True or False: The Eight Extraordinary Vessels have their own pertaining and connecting Zang-Fu organs, just like the 12 primary meridians.

A. True
B. False

Q18. Per Dr. Zhang's own words in the Week 9 review, the Yang Qiao and Yin Qiao vessels each "start" at:

A. Their first numbered coalescent point
B. Their respective confluent points, BL62 and KI6
C. GV1 and CV1
D. The inner canthus of the eye

Q19. Why are there 15 Luo-Connecting points instead of just 12 (one per primary meridian)?

A. Because GV, CV, and the Spleen Great Luo each add one more, covering back, front, and lateral chest
B. Because each Yin meridian has 2 Luo points
C. Because BL and GB each have 2 Luo points due to their size
D. There are only 12 -- this is a trick question

Q20. [T/F] True or False: Per Dr. Zhang's explicit statement in the Week 9 final-exam review, Divergent Channels and Collaterals are heavily emphasized on the final exam.

A. True
B. False

SCORING GUIDE

18-20 correct	Exam ready. Do a final pass on the Five Shu master table and Exam Traps page.
15-17 correct	Solid. Re-drill the specific weeks you missed (see the Answer Key's week labels).
11-14 correct	Re-read the Final Cram Sheet and Study Guide before the exam.
Below 11	Full re-study needed - work back through each week's Study Guide in order.

Note: Dr. Zhang confirmed the real final reuses quiz questions directly -- re-drill every weekly Quiz Kit (1-6) once more, not just this practice set.

ANSWER KEY — FULL EXPLANATIONS

Score yourself first, then read explanations only for questions you missed or guessed on.

FOUNDATIONS & THE THREE CIRCUITS (Week 1)

Q1 A **How many primary (regular) meridians are there, and how many total acupoints across the Five Shu system?**
12 primary meridians x 5 Five Shu points each = 60 points total. GV and CV also have points, but are not part of the 12 x 5 Five Shu system.

Q2 C **All of the following are true of the direction-of-flow rules EXCEPT:**
Yang meridians of the FOOT run HEAD -> FOOT (descending), not foot -> head. This is the most commonly reversed direction rule on exams.

Q3 A **Which circuit is completed first, chronologically, in the course sequence?**
Outer/Anterior (LU/LI/ST/SP, Weeks 2-3) completes first, then Inner/Posterior (HT/SI/BL/KI, Weeks 4-5), then Middle (PC/SJ/GB/LR, Week 6).

LU / LI -- METAL (Week 2)

Q4 B **LU7 (Lieque) is loaded with which combination of special categories?**
LU7 is Luo-Connecting of LU, the Confluent point opening the Ren Mai (paired with KI6), AND a Command Point for the head/neck -- three jobs on one point.

Q5 A **True or False: LI4 (Hegu) and SP6 (Sanyinjiao) are both forbidden in pregnancy.**
Both have strong, descending Qi/Blood-moving actions -- the two classic pregnancy-forbidden points from the primary-meridian portion of the course.

ST / SP -- EARTH (Week 3)

Q6 B **Where does the Stomach channel's pathway TRULY begin, versus its first numbered point?**
ST originates at LI20 (a crossing point of the LI channel) on the face -- ST1 Chengqi is simply the first NUMBERED point along the pathway, a classic exam trap.

Q7 D **All of the following are true of the Spleen channel's 8-cun crossover with Liver EXCEPT:**
This 8-cun SP/LR crossover is the ONLY distribution exception among ALL 12 primary meridians -- it does not recur elsewhere.

Q8 C **How many crossing points does the Stomach channel have, and where are most of them located?**
ST has 11 crossing points, most of them on the face and head -- which is why any facial problem (facial paralysis, runny nose, eye or mouth problems) should make you think of ST.

HT / SI -- FIRE (Week 4)

Q9 B **HT7 (Shenmen) holds which dual special-point role, and why is this role predictable?**
On Yin channels, Shu-Stream and Yuan-Source always coincide at the same point (e.g. HT7, LU9, SP3, KI3, PC7, LR3). On Yang channels, Yuan-Source is a separate 6th point.

Q10 B **SI3 (Houxi) is significant because it is:**
SI3 is SI's Shu-Stream point AND the Confluent point opening the Du Mai, paired with BL62 Shenmai (Yang Qiao Mai) -- useful for spine, neck, and febrile conditions.

BL / KI -- WATER (Week 5)

Q11 A **Which organ does the Bladder channel internally connect with, and which is a common exam trap?**
BL's only internal connection is Kidney. Confusing BL with a Metal/Lung pathway is a classic verified exam trap.

Q12 B **True or False: The two parallel lines of the Bladder channel on the back run sequentially, one after the other, rather than at the same time.**
False -- Dr. Zhang confirmed directly in class Q&A that both back lines (1.5 cun and 3 cun lateral to the spine) run SIMULTANEOUSLY, not as a sequential up-down loop.

Q13 B **A patient presents with heel pain. Which channel should you think of first, per Dr. Zhang's explicit clinical teaching point?**
Kidney -- its pathway curves directly behind the medial malleolus and through the heel; Dr. Zhang called this out explicitly as a common clinical presentation.

PC / SJ / GB / LR -- MIDDLE CIRCUIT (Week 6)

Q14 A **Which TWO primary channels have zero named crossing points?**
Heart and Pericardium are the only two primary channels with no crossing points -- a classic paired exam trap.

Q15 A **The Gallbladder channel's 12 crossing points span how many meridians, and which is the most-forgotten one?**
GB crosses 12 points across 6 meridians (SJ, LR, PC, SI, ST, GV) -- GV14 Dazhui is easy to forget since it sits on the posterior midline, away from GB's lateral course.

EIGHT EXTRAORDINARY VESSELS (Week 7)

Q16 C **Which pair of confluent points is described as the most-used pairing in clinical practice, per Dr. Zhang?**
SP4 Gongsun + PC6 Neiguan (Chong Mai + Yin Wei Mai) is repeatedly flagged as the most-used confluent pairing in clinic, treating chest, heart, and stomach disorders together.

Q17 B **True or False: The Eight Extraordinary Vessels have their own pertaining and connecting Zang-Fu organs, just like the 12 primary meridians.**
False -- the Extraordinary Vessels run superficially and do NOT pertain to or connect with internal Zang-Fu organs the way the 12 primary meridians do.

Q18 B **Per Dr. Zhang's own words in the Week 9 review, the Yang Qiao and Yin Qiao vessels each "start" at:**
Direct quote from the Week 9 review: the Yin Qiao and Yang Qiao vessels' running courses start from their confluent points -- BL62 Shenmai (Yang Qiao) and KI6 Zhaohai (Yin Qiao).

COLLATERALS, DIVERGENT, SINEW & CUTANEOUS (Week 8-9)

Q19 A **Why are there 15 Luo-Connecting points instead of just 12 (one per primary meridian)?**
12 paired-meridian Luo points + GV1 (back midline) + CV15 (front midline) + SP21 Dabao, the Great/Major Luo of Spleen (lateral chest) = 15 total, giving full front/back/lateral coverage.

Q20 B **True or False: Per Dr. Zhang's explicit statement in the Week 9 final-exam review, Divergent Channels and Collaterals are heavily emphasized on the final exam.**
False -- Dr. Zhang directly told the class that the review portion of the final does NOT cover divergent channels and collaterals in detail. Know the concepts, but they are low-yield versus the primary meridian pathways, Five Shu points, and Confluent points.
