

QUIZ-NIGHT STUDY PLAN

BL / KI - 6:25 PM to 9:00 AM

An evidence-based schedule, with the learning theory behind every block

TONIGHT AT A GLANCE

6:25-7:15 PM - Orient - Reload Context (50 min)
7:15-8:15 PM - BL Retrieval, Cold (60 min)
8:15-8:50 PM - KI Retrieval, Cold (35 min)
8:50-9:20 PM - Trap Drill + Command Points + Confluent Pairs (30 min)
9:20-9:50 PM - Re-Drill Only Your Misses (30 min)
9:50-10:00 PM - Circadian Clock, One Cold Pass (10 min)
10:00 PM - STOP. Sleep.
7:00-7:30 AM - Light Final Pass (30 min)

THEORIES WOVEN IN:

Expectancy-Value | Mindset | Flow | Interteaching | Consolidation

HOUR-BY-HOUR SCHEDULE

Week 5

Each block cites the exact document + page to use

Print Edition

6:25-7:15 PM

Orient - Reload Context

Mindset

Materials: Study Guide + Special Points Decoder

Skim once, don't memorize yet. You're reactivating existing memory traces, not building new ones.

7:15-8:15 PM

BL Retrieval, Cold

Interteaching

Materials: Retrieval Drill p.2-3 -> check p.7

Cover the answer key. Write what you can from memory FIRST. Extra time on gold-dot high-yield points and the full Back-Shu spinal-order block.

8:15-8:50 PM

KI Retrieval, Cold

Interteaching

Materials: Retrieval Drill p.4 -> check p.8

Same cold-first process. KI is smaller (27 pts) - this should move faster than BL did.

8:50-9:20 PM

Trap Drill + Command Points + Confluent Pairs

Expectancy-Value

Materials: Retrieval Drill p.5-6 -> check p.9

This is where quizzes try to trip you: BL62 vs KI6, forbidden-in-pregnancy list, command points.

9:20-9:50 PM

Re-Drill Only Your Misses

Flow

Materials: Whatever you got wrong above

Don't redo everything. Go back only to what you blanked on - this is the highest-yield half hour of the night.

9:50-10:00 PM

Circadian Clock, One Cold Pass

Interteaching

Materials: Retrieval Drill p.6 circadian block

BL 3-5pm, KI 5-7pm anchored against the full 12-organ clock.

10:00 PM

STOP. Sleep.

Consolidation

Materials: -

Memory consolidation happens during sleep. Cramming past this trades tomorrow's recall for tonight's false sense of coverage.

HOUR-BY-HOUR SCHEDULE (CONT.)

Week 5

Each block cites the exact document + page to use

Print Edition

7:00-7:30 AM

Light Final Pass

Expectancy-Value

Materials: Only your remaining weak points from last night
 No new material. This is confidence-calibration, not learning.

THE THEORY BEHIND THE SCHEDULE

Week 5

Why each block is placed where it is

Print Edition

EXPECTANCY-VALUE THEORY ($M = E \times V - C$)

Your motivation to study right now is a function of Expectancy (can I actually pass this?), Value (does this matter to me?), minus Cost (how much does studying this way drain me?). The schedule is built to raise E fast: an early retrieval win at 7:15 shows you concrete proof you know more than you think, which raises expectancy for the rest of the night. The trap drill later targets your highest-Value items (the questions most likely to appear) for the least Cost (30 min, not another hour of rereading).

MINDSET THEORY

Feeling behind at 6:25 PM is a fixed-mindset trigger - it frames tonight as a test of whether you're 'good enough,' which increases anxiety and narrows attention. The orient block reframes the evening as a process (what do I still need to practice) rather than a verdict (do I know this or not). That reframe alone tends to improve retention under time pressure.

FLOW THEORY

Flow requires a tight match between challenge and skill, with immediate feedback. The re-drill block works because by 9:20 PM you already know exactly where your gaps are (immediate feedback from the earlier cold-recall), so the remaining work is precisely calibrated to your actual skill gaps - neither so easy it's boring nor so broad it's overwhelming.

INTERTEACHING / BEHAVIORAL MODEL (BOYCE & HINELINE)

Every retrieval block in this plan follows the same structure your Prep Guides use: attempt first, cold, before any answer is visible - then check. Reading an answer key before attempting builds recognition, not recall, and recognition is what produces a quiz score that doesn't feel earned. Retrieval-first is slower per page but is the only format that reliably produces durable recall under quiz conditions.

SLEEP & MEMORY CONSOLIDATION

New declarative memory (like point names and pathways) is stabilized during sleep, particularly in the hours after learning. Studying until 2 AM before a 9 AM quiz doesn't just cost you rest - it actively cuts into the window your brain needs to consolidate everything you drilled tonight. The 10 PM stop time is not a compromise; it's the highest-yield use of those final hours.

YOUR FULL WEEK 5 MATERIAL SET

Week 5

What each document is for, and when to use it tonight vs. this week

Print Edition

ALL WEEK 5 DELIVERABLES - PRINT + REMARKABLE EDITIONS

Study Guide

Reference only - pathways, points, categories. Read, don't quiz from this.

Cram Sheet

Fast-lookup companion. Use for a 5-minute morning skim, not deep study.

Quiz Kit

Standalone practice exam. Simulate real quiz conditions, timed.

Prep Guide (PLA)

Sections A-F + Inter-Quiz with separate Answer Key. Your main interteaching tool.

Special Points Decoder

All special-category points (Yuan, Luo, Xi-Cleft, Back-Shu, etc.) with BL/KI examples.

Practice-Draw Pages

Blank pathway diagrams. Draw from memory, then check against MOA figures.

Flashcards (Anki + PDF)

Spaced-repetition set. Best used in short bursts across the week, not one sitting.

Class Muddiest-Point Pool

Template for logging anything still unclear after tonight.

Master Comparison (thru Wk5)

Cumulative cross-week view - useful for the trap drill's carried-over items.

Retrieval Drill (new)

Tonight's primary tool - blank-first BL/KI recall + cross-week traps.

All files also live in your GitHub repo: [jc09170307/AC300, studyguides/](https://github.com/jc09170307/AC300_studyguides) folder.
