

Lecture Consolidation Sheet

Acupuncture Points · Final Exam Master Review

Five Shu Points · Confluent Points · 15 Collaterals · Cutaneous Regions

This lecture has already occurred (full transcript + slide deck available), so this sheet is framed as a consolidation tool following the same Behavioral Interteaching structure (Sections A-F + Inter-Quiz) used every week, rather than a true pre-lecture draft.

NEXT WEEK: COMPREHENSIVE FINAL EXAM

Material from Weeks 1-9, 30 questions. No new quiz or homework this week -- submit outstanding Homework 5 before the final.

A I Can Statements

Rate your confidence before AND after lecture review

Rate your confidence (1=not at all, 5=fully confident) on each statement before and after reviewing this week's material.

I can recite all 60 Five Shu Points (5 per meridian x 12 meridians) with correct Jing/Ying/Shu/Jing/He sequencing.

Pre 1 2 3 4 5 Post 1 2 3 4 5

I can state all 8 Confluent Points, their paired vessel, and their master-couple partner point.

Pre 1 2 3 4 5 Post 1 2 3 4 5

I can reproduce the 15-Collateral master table (meridian -> Luo point -> partner meridian) from memory.

Pre 1 2 3 4 5 Post 1 2 3 4 5

I can explain why Cutaneous Regions form only 6 groups (not 12), and name the Hand+Foot pair in each group.

Pre 1 2 3 4 5 Post 1 2 3 4 5

I can reproduce the Final Exam Master Table: pertaining/connecting organ, first/last point, total points, direction of flow, and one special-area landmark, for all 12 primary meridians.

Pre 1 2 3 4 5 Post 1 2 3 4 5

B Activate & Connect

Bridging from Week 8

Before diving into new content, reconnect with what Week 8 already established.

CONFIRMED this week: Week 8's materials flagged the GB/LR collateral + divergent-channel narration and all 12 Muscle Region / Cutaneous Region slides as "self-study, not reached live" (Dr. Zhang said she would cover the middle circuit "next week"). The Week 9 deck's own agenda (slide 3) and the Week 9 live transcript confirm this content WAS delivered live this week -- GB/LR collaterals, GB/LR divergent channels, and all 12 Muscle + 12 Cutaneous Regions are no longer self-study. Full diagrams for GB/LR muscle regions are included below; see the Week 8 Study Guide for the complete diagram set covering the anterior and posterior circuits.

Quick recall (no peeking):

- What are the 3 extra Collaterals (not tied to a paired-organ meridian)?

- Name any 2 of the 8 Confluent Points and their paired vessel.

- Why do Cutaneous Regions form only 6 groups instead of 12?

C

Vocabulary Pre-Load

Pinyin -> English, no CJK

PINYIN	ENGLISH	MY NOTE
Wu Shu Xue	Five Shu (Transport) Points	
Jing (Well)	Well -- “where it emerges”, fingertip/toe-tip point	
Ying (Spring)	Spring -- “where it flows”, before the MCP/MTP joint	
Shu (Stream)	Stream -- “where it pours”, after the MCP/MTP joint	
Jing (River)	River -- “where it travels”, forearm/lower leg	
He (Sea)	Sea -- “where it enters”, near elbow/knee	
Jiao Hui Xue	Confluent (opening) point of an Extraordinary Vessel	
Luo Mai	Collateral (connecting) vessel	
Ashi	“Ouch” point -- located by tenderness, not fixed anatomy	
PMOS	Polyendocrine Metabolic Ovarian Syndrome (2026 renaming of PCOS)	

D Anticipatory Questions

* = high exam probability

Q1* FIVE SHU

Which Five Shu point category treats disorders of the six Fu organs, and why does its location (near elbow/knee) support that function?

Q2* CONFLUENT POINTS

Name the 4 master couples of the Eight Confluent Points and the body region each couple treats.

Q3 COLLATERALS

Why are there 15 Collaterals rather than 12 -- what gap do the 3 extra ones (CV/GV/Spleen Great Luo) fill?

Q4* CUTANEOUS REGIONS

What is the one exception to the usual Yin/Yang, Hand/Foot organization that makes Cutaneous Regions form only 6 groups?

Q5 FINAL EXAM

For the Kidney meridian, state its pertaining organ, connecting organ, first point, last point, and direction of Qi flow.

E

Inter-Quiz

Checkpoint self-test -- ACQ (new) / MAINT (review)

Answer from memory, then check the answer key at the end of this section. Score yourself before moving on.

- 1 ACQ Which meridian's Luo point is Fenglong ST40, and which meridian does it connect to?
- 2 ACQ Name the Jing-Well point of the Liver meridian.
- 3 MAINT Which Confluent point pairs with Shenmai (BL62), and which vessel does that pair open?
- 4 ACQ How many total points does the Bladder meridian have, and why is it called the largest meridian?
- 5 ACQ Name the 3 extra Collaterals (not tied to a paired organ meridian) and their originating points.
- 6 MAINT State the qi-flow direction rule for the Yin meridians of the hand.

E

Inter-Quiz — Answer Key

1. Fenglong ST40 is the Luo point of the Stomach meridian; it connects to the Spleen meridian.
2. Dadun LR1.
3. Houxi (SI3) pairs with Shenmai (BL62); together they open the Du Vessel (Houxi) / Yang Qiao Vessel (Shenmai) -- Houxi opens Du Mai, Shenmai opens Yang Qiao Mai.
4. 67 points -- the largest meridian in the body, with 4 branches, running from the inner canthus (BL1) to the lateral small toe (BL67).
5. Conception Vessel (from Jiuwei CV15), Governor Vessel (from Changqiang GV1), and the Major Collateral of the Spleen (from Dabao SP21).
6. Yin meridians of the hand flow chest -> hand.

Self-check now -- score this block: ____ / 6 before moving on.

F

Clinical Case — Before-Lecture

PCOS/PMOS presentation

A 29-year-old woman presents with irregular menses (cycles 45-60 days), hirsutism, recent weight gain, and difficulty conceiving after 14 months of trying. Labs show elevated fasting insulin and an elevated LH:FSH ratio consistent with PCOS/PMOS. She has tried metformin with limited tolerance (GI side effects) and asks about acupuncture as an adjunct.

Pre-Lecture Question:

Before reading the protocol: which basic acupoint set would you reach for first, and what is your reasoning for choosing points that address BOTH the metabolic (insulin resistance) and reproductive (menstrual/ovulatory) dimensions of this presentation?

After-Lecture Synthesis Question:

After reviewing Dr. Zhang's protocol: how does alternating Protocol 1 and Protocol 2 across the treatment course address the "Phlegm-Dampness Obesity" framework specifically, and why does she emphasize a 3-4 month minimum course length for reproductive/gynecological cases?

NEXT WEEK: FINAL EXAM

CONFIRMED via both the live transcript and the 2026 slide deck's own final slide: NEXT WEEK IS THE COMPREHENSIVE FINAL EXAM (material from Weeks 1-9, 30 questions per Dr. Zhang's verbal answer in class). No new quiz or homework was assigned this week -- Dr. Zhang stated in lecture that Homework 5 (from Week 7/8) was still outstanding for some students and reminded the class to submit it before the final, since grades close after the exam. This Quiz Kit and Cram Sheet are self-test review material for that comprehensive final, not a stand-in for a new graded quiz.
