

WEEK 4

Special Points Decoder

Heart & Small Intestine Channels

HT (9 pts) + SI (19 pts) = 28 Points

This Document Contains:

- Every special-point CATEGORY explained in plain terms
- Five-Shu (Jing-Well through He-Sea) with yin/yang elements
- Yuan-Source, Luo, Xi-Cleft, Confluent, Back-Shu, Front-Mu
- Lower He-Sea, Hui-Meeting, Crossing points
- Worked HT & SI examples for every category

QUIZ 4 (next class) covers: HT & SI channels

MIDTERM (Week 5) covers Weeks 1-4 cumulative — many midterm questions reuse quiz material.

MOA: HT pp.208-221 | SI pp.222-249 · CAM: HT/SI color figures

Dr. Vivian Zhang, Ph.D. · Jon Centeno, D.AcHM Candidate · VUIM

Special Points Decoder — What Each Category Actually Means

HT & SI examples

Know the CATEGORY, not just the point. Every point below is defined by what its category does in the body.

The Five-Shu elements differ on yin vs yang channels - both are noted where they apply.

Jing-Well

Wood

Where channel Qi begins to bubble up; most distal point (fingertip/toe-tip). Used for acute conditions, mental restlessness, and reviving consciousness.

HT9 Shaochong | SI1 Shaoze

Ying-Spring

Fire (yin) / Water (yang)

Qi glides like a shallow spring; just distal to the MCP joint. Clears heat from the channel and its organ.

HT8 Shaofu (clears heart fire) | SI2 Qianggu

Shu-Stream

Earth (yin) / Wood (yang)

Qi pours down a stream; on yin channels this point doubles as the Yuan-Source. Treats heaviness, joint pain, and intermittent chronic disease.

HT7 Shenmen (= Yuan-Source) | SI3 Houxi
(also Confluent)

Jing-River

Metal (yin) / Fire (yang)

Qi flows abundantly like a river, near the wrist. Treats cough, asthma, chills-and-fever, and disorders of voice.

HT4 Lingdao | SI5 Yanggu

He-Sea

Water (yin) / Earth (yang)

Qi collects and enters deep toward the organ, like a river reaching the sea; at the elbow. Best for the Fu organ itself and for rebellious Qi.

HT3 Shaohai (clears heart fire, fear/arm pain) | SI8 Xiaohai

Yuan-Source

The point where the organ's primary (source) Qi surfaces. Tonifies and regulates the organ directly; pairs with the Luo of the coupled channel (Host-Guest technique).

HT7 Shenmen | SI4 Wangu (wrist/finger pain, febrile disease)

Luo-Connecting

The junction that links a channel to its interior-exterior partner. Treats disorders of BOTH channels and its own symptom pair (excess/deficiency).

HT5 Tongli | SI7 Zhizheng

Xi-Cleft

A deep cleft where Qi and Blood pool. THE point for acute, painful, and sudden flare-ups; yin-channel Xi-Cleft points also treat bleeding.

HT6 Yinxi (night sweats, acute heart pain) | SI6 Yanglao

Confluent

Opens one of the Eight Extraordinary Vessels. Paired across two channels to command that vessel (the Host-Guest pairing of the extraordinary system).

SI3 Houxi opens the DU MAI (pairs with BL62) — HT has no confluent point

Command (Four/Six)

A point that 'commands' a whole body region regardless of channel theory - memorize by region. Neither HT nor SI holds a Command point.

LI4 = Command of Face/Mouth (Wk 2) | ST36 = Command of Abdomen (Wk 3)

Lower He-Sea

The true He-Sea for the six Fu organs, all found on the LEG yang channels. Where you treat the Fu organ even when its own channel is on the arm.

SI's Lower He-Sea = ST39 Xiajuxu (on the ST channel, not SI itself)

Back-Shu

Points on the Bladder channel beside the spine that transport Qi to a specific organ. Diagnostic (tenderness) and tonifying for chronic organ patterns.

BL15 Xinshu (Heart) | BL27 Xiaochangshu (Small Intestine)

Front-Mu

Points on the chest/abdomen where an organ's Qi gathers on the front of the body. Pairs with the Back-Shu (Shu-Mu technique); best for acute conditions.

CV14 Jique (Heart) | CV4 Guanyuan (Small Intestine)

Hui-Meeting

Eight influential points, each governing one tissue or substance (Qi, Blood, sinew, vessel, bone, marrow, Zang, Fu). Not on the HT/SI channels but tested as a category.

e.g. CV17 = Hui of Qi | LU9 = Hui of Vessels
(Wk 2)

Crossing (Meeting)

Where two or more channels intersect; one needle treats every channel that crosses there.

HT has ZERO crossing points — the only
primary channel with none. SI crosses BL1
and GB14 near the face/eye.
